Particularly indicated for active energy metering and for cost allocation in applications up to 100 A (direct connection), with dual tariff management availability. It can measure imported and exported energy or be programmed to consider only the imported one. Housing for DIN-rail mounting, with IP51 front degree protection. The meter is optionally provided with pulse output proportional to the active energy being measured, RS485 Modbus port or M-bus port. Available for legal metrology (PF option, only for imported energy).

STANDARD

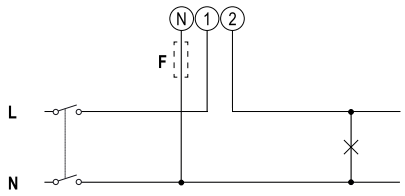
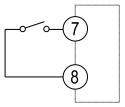
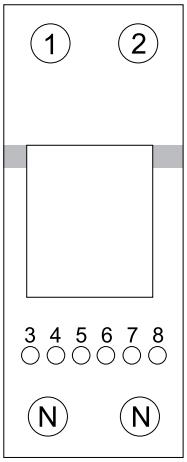
Wiring diagrams

Current (F 315mA) **Fig.1**

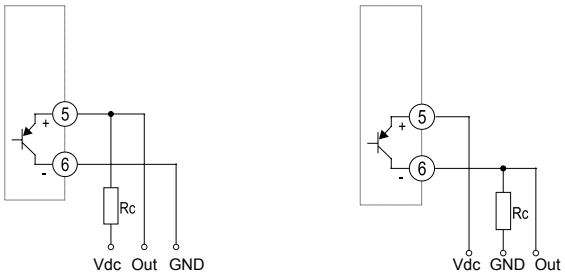


Digital Input **Fig.2**



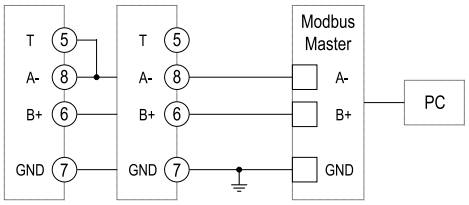


Open collectors output **Fig.3**



The load resistance (Rc) must be designed so that the closed contact current is under 100 mA (V_{on} is equal to 1 V dc). DC voltage (V_{off}) must be less than or equal to 80 V.

RS485 Modbus communication port **Fig.4**



Additional instruments with RS485 are connected in parallel. The serial output must only be terminated on the last network device connecting terminals B+ and T. For connections longer than 1000 m or networks with more than 160 instruments, use a signal repeater.
